

Choosing the Right Company

As a customer, you have the right to shop contractors and select the right contractor. It's important that you make the right choice. Here's why you should choose us:

1. We are a company with an established history serving the local areas; therefore, we have a reputation to protect.
2. We are licensed and insured, and carry the proper certifications in VA, NC, and the surrounding towns, counties, and cities.
3. We have a wide variety of equipment with skilled operators to build the job adequately.
4. We pay attention to details. We look for problems, eliminate them, before they show up in the final product such as: eliminating or diverting water, and soft base issues.
5. Corner-cutting is not, nor ever will be part of our business practice.
6. We build to professional standards set forth by VDOT.

We aren't always the cheapest contractor; but, we are your best value for quality and your next investment. Make sure it's done right the first time.

HAULIN' IT...

JC Joyce TRUCKING & PAVING Co., Inc.

**A FAMILY OWNED AND
OPERATED COMPANY,
AND QUALITY DRIVEN
SINCE 1975**

Offering Services from...
"Driveways to Highways"

History

J.C. Joyce, and his wife Dana, started J.C. Joyce Trucking & Paving Co., Inc. in 1975. As a young man, he worked tirelessly with a handful of others to build a company from the ground up. His desire was to build a business reputable for quality and honest work. With success, came growth and evolved into a strong organization offering many services and a diverse portfolio of past and present work.

Surface Treating, Seal coating, Pavement Markings

Stone, Sand, Gravel, Landscaping Materials
Available for Private Delivery

Education About Asphalt

Asphalt is a mixture of different sized rocks, sand, and binding asphalt liquid. It is produced hot at a plant, and laid with a machine, as opposed to being formed and poured like concrete. While concrete is rigid, asphalt is flexible, making it a better solution for moving traffic areas and easier to repair. After laydown, asphalt is compacted to eliminate a high percentage of any air voids which produce longer lasting asphalt life. What determines how long the asphalt will last is highly dependent on the base it is laid upon, and controlling water.

New asphalt remains tender until cured which can take up to 1 year, and is made pliable by heat, so be cautious during summer heat. New asphalt may show tire impressions, or shoving if abused by vehicular traffic during the curing process. Motorcycles are particularly vulnerable as kickstands concentrate weight in a small space and can damage the asphalt and turn over. New asphalt can be sealed after 60-90 days.
